

I decided to change up my project a little bit. At my current work we use a system to calculate our productivity. It is time consuming, repetitive and paper based. I thought it would be a good idea to come up with an app or an online system to calculate our productivity without repetitive work. Below is a wireframe of my potential product. My goal is to have three pages. I plan on having the daily list and productivity sheet information communicate with each other so that there is a carry over of info without repetition. In the daily sheet, I plan on having a drop-down menu for units and codes for which the patient was seen. The RVU calculator will take input from the daily sheet and calculate productivity, eventually. In the mobile view port, the menu will be a drop down. To do list will have pop up reminders if times on to do list are set. There will be an ability to close out the pop-up windows.

Daily Sheet
To Do List
Productivity Sheet

Ability to add items to the to do list

Reminders

reminders

items to add to the to do list

Daily Sheet
To Do List
Productivity Sheet

list of patients

corresponding treatment units

RVU and productivity Calculator

will have preset drop down to choose charges

will have functions to automatically calculate RVUs and productivity based on units input

Patient 1 Name:
Treatment Units
Patient 2 Name:
Treatment Units
Patient 3 Name:
Treatment Units

RVU and productivity Calculator

Daily Sheet:

Daily Sheet
To Do List
Productivity Sheet

Therapist Name, Credentials
Date

List of Patients for the Day
If Seen, Charge Units
Check if not seen

Therapist Name, Credentials
Date:
List of patient's for the day
Patient 1 Name:
If seen, Charge Units
Check if unseen
Patient 2 Name:
If seen, Charge Units
Check if unseen
Patient 3 Name:
If seen, Charge Units
Check if unseen

when clicked will expand to daily sheet, to do list, productivity sheet
